To Whom It May Concern:

This letter is to certify that the food contact products made from the polycarbonate resins meet all applicable requests and regulations in the U. S. regarding food and safety. Bisphenol-A is key building block used to make the polycarbonate resin. The United States Food and Drug Administration (FDA) regulation prescribing safe conditions of use can be found at 21 CFR 177.1580.

Products produced with the polycarbonate plastic based resin are meant for its intended use as specified in Cambro's written materials (e.g. instructions and product labels). The resin meets the FDA regulations to be used safely with food.

Per conversation with our supplier of polycarbonate material and the current government regulations, the Polycarbonate plastics and epoxy resins made with bisphenol-a (BPA) have been rigorously tested and safely used for more than 40 years. They have been repeatedly found to be safe for consumer use by governments around the world. The levels consumers may encounter are typically one million times lower than levels found to have no adverse affects and are below government safety standards. Further information can be found at www.bisphenol-a.org.

Please feel free to contact me directly if you have any additional questions concerning these products, materials and their uses.

Thank you,

A handwritten signature in black ink that reads "Jessica M. Magee".
